Project 1 Documentation

How was the site made?

Content was placed following the project instructions of what must be included. Formatting and color palette were implemented following. Responsiveness was implemented last after all content was setup to my satisfaction on a full screen. Responsiveness was used through changing the flex-flow of flexbox sections once a certain width was hit.

Design Process Notes

As of now, I'm not sure what audience or goal I'm really going for with this portfolio. I hope to figure that out as I progress with a better idea of what I want later in this semester or next semester. I'm satisfied with what I've included as of now but maybe I'll implement some a carousel for my project overviews later after I'm more comfortable with JavaScript. I organized my content with info about me, project overviews, and then project specific details. The image below shows my original sketch of what I had in mind and ended up implementing.

An attempt was made to implement a hamburger menu when the viewport is smaller. This was tried through bootstrap as recommended by Professor Chin however I could not get my original css to override the bootstrap css. I then attempted to make one through html and css after searching for methods on the web, but this also ended with the nav behaving strangely forcing me to revert the nav to what I originally had. I may attempt once again later in the year after I have developed my skills more.
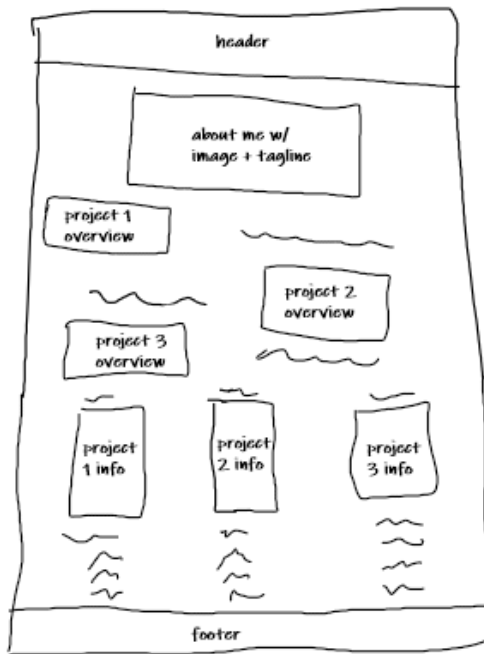

Source Information

Image of me was taken by me and the images used in the project sections are placeholder images taken from picsum.com with a size of 600px x 300px and 300px x 300px for the project overview and project detail sections, respectively. For fonts, I took Gowun Dodum and Scheherazade New from fonts.google.com.

Future Design Notes

- Images should be 600px x 300px and 300px x 300px
- Carousel for project overview possibly
- Hamburger menu for better responsive navbar
